PROFILE SUMMARY

Full Stack Developer at HFN IT Services, Bengaluru, building scalable and secure MERN stack applications with real-time WebSocket features, TypeScript, and Strapi CMS. Currently working on an AI-powered LMS and a ticket management system (Resolve) with smart categorization. Over 1.5 years of experience across 2 companies delivering secure, scalable systems with JWT, OAuth 2.0, RBAC, Docker, and CI/CD via GitHub Actions. Recognized as Top 10 Project Admin (Rank 8) at GSSoC'24 and open-source contributor at GSSoC'23; led a 600-member campus tech community as Google Developer Student Club Lead.

PROFESSIONAL EXPERIENCE

Full Stack Developer | HFN IT Services, Bengaluru **Jun 2025 – Present**

- Build scalable full-stack products using React.js, TypeScript, Node.js, Express, and Strapi with real-time WebSocket features and optimized MongoDB schema design.
- Implement secure auth flows with JWT, OAuth 2.0, and RBAC across 2 live production systems.

LMS – Learning Management System

- Optimized app performance using TanStack Query (React Query) — cut page load time from 28s to 4s and reduced API calls from 50 to 10 per page through smart caching and query deduplication.
- Built an AI-powered LMS system using RAG Vector DB, an H5P interactive course engine, and WebSocket live sessions, along with an integrated code editor powered by Judge0; managed content via Strapi CMS with RBAC across 5 user roles.

Resolve – Ticket Management System

- Implemented TanStack Query for server-state management with efficient pagination and filtering on a TypeScript, Strapi, MongoDB stack.

Full Stack Developer | Web Optimization Software Solution, Ahmedabad **Jan 2025 – Jun 2025**

- Developed responsive web applications with React.js, JavaScript, and CSS. Added WebSocket real-time chat features to improve user engagement.
- Secured the platform using JWT, OAuth 2.0, and cookie-based session management.

PROJECTS

URL Shortener – Microservice-Based Link Management Platform ↗ Live

- Architected 3 independent microservices (URL resolution, analytics, user management) deployed via Docker with per-service scaling; stack: Node.js, Express, MySQL.
- Implemented per-IP/user rate limiting, custom aliases, Time-To-Live (TTL) expiry, QR code generation, bulk REST operations, and OWASP-aligned spam/malicious URL detection.
- Built full analytics dashboard tracking click counts, geographic distribution, referrer sources, device/browser breakdown, and time-series trends; added redirect chain detection and password-protected links.

Hack_Cookies – Chrome Extension ↗ Link

- Built a TypeScript Chrome extension enabling developers to inspect, edit, and delete cookies, session Storage, and local Storage directly from the browser toolbar.
- Supports live editing with instant reflection in the active tab, reducing debug cycles for front-end engineers by eliminating manual DevTools navigation.

CareerZunction – Internship Search Platform ↗ Live

- Built a mobile-first React.js, TypeScript platform surfacing 250 annual internships, open-source programs, and hackathons; designed UI with Figma and Sass for a polished responsive experience.
- Achieved sub-2s load times through code-splitting and lazy loading; serves an active student community using the platform as a primary opportunity discovery tool.

DevLabs – Software Distribution Platform ↗ Live

- Open-source platform cataloging 400 free developer tools and 100 open-source projects for college students; built with React.js, TypeScript, Vite, Redux, Ant Design, and MongoDB.
- Grew community to 150+ active members; structured contribution workflows reduced onboarding friction for new open-source contributors.

Dravya Kosh – Inventory Management Application ↗ Live

- MERN stack inventory system for small businesses with JWT auth, rate limiting, and RBAC. Built with React.js, TypeScript, Vite, Redux, Express.js, MongoDB, and Tailwind CSS.

NariShakti – Women Safety Map-Based Application ↗ Link

- City intelligence dashboard visualizing unsafe areas via React-Leaflet maps with real-time WebSocket alerts, dark/light theme, and community-driven safety reporting.
- Built with TypeScript, Node.js, Express.js, and Framer Motion. Includes city-level intelligence overlays with animated map transitions.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, Python, C/C++, SQL

Frontend: React.js, Next.js, Vite, HTML5, CSS3, Framer Motion, WebSocket

Backend: Node.js, Express.js, Strapi, H5P, REST APIs, RAG Pipelines, AI Integration

Databases: MongoDB, MySQL, PostgreSQL, Vector DB (Pinecone), Prisma

DevOps & Cloud: Docker, AWS, GitHub Actions (CI/CD), Vercel, Railway, Git

Auth & Security: JWT, OAuth 2.0, RBAC, IDOR Prevention, OWASP Top 10, Session Management

UI / Tooling: Tailwind CSS, Ant Design, Redux, TanStack Query, Figma, Postman

AWARDS & ACHIEVEMENTS

- Recognized as Top 10 Project Admin at GSSoC'24 (Rank 8) and secured Rank 50 at GSSoC'23 — out of thousands of contributors.
- Google Developer Student Club Lead – built and led a campus tech community of 600 students, organizing workshops, hackathons, and mentorship sessions.
- Solved 400 DSA problems on LeetCode and other platforms; secured Rank 11 on the GFG Campus leaderboard.

EDUCATION

B.Tech – Computer Science & Engineering | Radharaman Institute of Technology and Science2020 – 2024

CGPA: 8.2 / 10.0 | Coursework: OOPs, Data Structures, Algorithms, OS, Computer Networks, DBMS, System Design
